Nontransferable and No Refunds.

# Benefiting THERAPY FOR DISABLED CHILDREN THROUGH HORSES

Therapeutic horsemanship teaches problem solving, self-control, and a host of other valuable life skills. For victims of emotional injuries, it is sometimes easier to trust an animal than a person. Many riders learn to relate to others by first relating to a horse.

The relationship with a live animal, the mastery of new challenges, and working out in the fresh air of the country are some of the many factors that contribute to the amazingly positive impact equestrian therapy has on its participants.

Therapeutic riding is widely recognized as a beneficial method of therapy for people with physical, mental, emotional or sensory deficits. For many different reasons horses, as therapists, inspire many people with handicapping conditions to accomplish things thought to be impossible, all the while fostering feelings of pride, joy and sense of well being.
